

Inspect Feature

Basic Course:

User selects the "inspect" feature of the Celestial body from the Inspection mode option. There will be different options of physical phenomena of the simulation. When the user selects any one of the listed options, display a description of the feature and why it occurs in nature. If the feature is one that can be visualized on the simulation itself (e.g. Van Allen belts, temperature flow, wind and fluid flow), display this phenomena as a map or overlay on the simulation display.

Alternate Courses:

The user has no celestial bodies in the simulation:
Display an informative modal on the screen indicating that the simulation has no celestial bodies to inspect.
