

Select Orbital Settings

Basic Course

User selects the "edit orbital settings" option of the Stellar Model tab. The tab will display different options relating to the characteristics of the Celestial Body in relation to the chosen Stellar Model. The user selects new options and values for tilt, orbital radius, orbital eccentricity, etc. The user will be prompted to confirm these changes by the system, before the Simulation is updated to display the new star system.

Alternate Course

The user has not selected a Stellar Model: The user is prompted to select a Stellar Model for the Simulation. The user selects a Stellar Model and the system displays the Orbital Settings tab.
